

🔴 2 best project ideas with code structure

અહીં હું તમને Google / Microsoft level માટે 2 strong backend projects આપી રહ્યો છું + તેમનો proper code structure (Python + Django/FastAPI + MySQL/SQLite).

🟢 1) 🛒 E-Commerce Backend System (Very Important Project)

🌀 Idea:

- Users products browse કરે
- Cart add કરે
- Order place કરે
- Admin products manage કરે

👉 This is FAANG level project

📁 Code Structure (Django Recommended)

```
ecommerce_backend/  
|  
|—— manage.py  
|—— requirements.txt  
|  
|—— ecommerce_project/  
|   |—— settings.py  
|   |—— urls.py  
|   |—— wsgi.py  
|  
|—— users/  
|   |—— models.py      # User model  
|   |—— views.py       # Login/Register API  
|   |—— urls.py  
|   |—— serializers.py  
|  
|—— products/  
|   |—— models.py      # Product table  
|   |—— views.py  
|   |—— urls.py  
|   |—— serializers.py  
|  
|—— cart/  
|   |—— models.py      # Cart items
```

```
|   |—— views.py
|   |—— urls.py
|
|—— orders/
|   |—— models.py    # Orders
|   |—— views.py
|   |—— urls.py
|
|—— db.sqlite3
```

📌 Features:

- JWT Authentication 🔒
 - Product CRUD
 - Cart system
 - Order management
 - Admin panel
-

💡 Why this project is strong?

- 👉 Real-world system
 - 👉 Backend + DB + API all covered
 - 👉 Interview favorite project
-

🟦 2) 🍔 Food Delivery System API (Advanced Project)

🎯 Idea:

- User food order 📝
 - Restaurant list
 - Delivery tracking
 - Payment simulation
-

🏠 Code Structure (FastAPI / Django REST)

```
food_delivery_api/
|
```

```
|—— app/
|   |—— main.py      # Entry point
|
|—— models/
|   |—— user.py
|   |—— restaurant.py
|   |—— order.py
|
|—— routes/
|   |—— auth.py      # Login/Register
|   |—— food.py      # Food items API
|   |—— order.py     # Order API
|
|—— database/
|   |—— connection.py # MySQL/SQLite connection
|
|—— services/
|   |—— auth_service.py
|   |—— order_service.py
|
|—— utils/
|   |—— jwt_handler.py
|   |—— helpers.py
|
|—— requirements.txt
```

🚩 Features:

- Login/Register (JWT)
 - Food listing API
 - Add to cart
 - Order tracking
 - Restaurant management
 - REST API (very important)
-

💡 Why this project is powerful?

- 👉 API-based system (modern backend)
- 👉 FastAPI/Django REST experience
- 👉 Interview + resume strong

 Final Advice (Very Important)

 If you build these 2 projects properly:

- Resume becomes FAANG-ready
- Interview question easy **ඇදේ** **ඉ**
- Salary boost chance high

 Bonus Tip

Project must have:

- GitHub repo
- README file
- Screenshots
- API documentation (Swagger/Postman)
